

Handoff — Trav

Audience, current product state, beta results, and your role in the launch.

Internal Document · Confidential

September 4, 2026

1 · What Exists

Product: Elevaid matches HBCU students to scholarships they qualify for, automatically. Tagline: "Where access meets opportunity." Business model is B2B — institutions pay (\$500–2,000/month, target 107 HBCUs nationally), students never do.

Status: Live at elevaid.pro. Soft-launched during Morehouse orientation week. Currently in early growth phase across the AUC (Morehouse, Spelman, Clark Atlanta, Morris Brown) ahead of a wider multi-school rollout.

Current audience — live numbers, Sept 4, 2026

SCHOOL	STUDENTS
Morehouse	41
Spelman	8
Clark Atlanta	4
Morris Brown	2
Total	55

Real, organic signups — not a projection. Concentrated at Morehouse, which is why campus-leader relationships at the other three schools move the needle fastest right now.

Student experience today

Sign up → short profile (school, major, GPA, grad year) → dashboard of real scholarship matches with award amount, deadline, and a pre-validated link (checked for dead links/CAPTCHA before it reaches a student). Students can mark applications and track status. No ads, no upsell.

Beta results

- 55 students, real usage, matching engine confirmed working end-to-end
- Every registered student currently matches at least 4 live scholarships — monitored automatically, every day
- A pipeline bug that was silently removing live scholarships was caught and fixed this cycle; a daily automated check now exists specifically to catch this kind of issue immediately instead of after the fact

CURRENT GAP

4 active scholarships live (the resource this replaces had 150+ listed). This is the number to calibrate outreach around this week.

2 · What's Needed

- **This week:** relationship-only outreach to SGA leaders. No product walkthrough yet.
- **If a scholarship count comes up:** lead with the mechanism, not the number — automatic matching, every link validated before a student sees it, an application tracker, built by a Morehouse student for AUC students. True today regardless of inventory size.

On hold, not canceled — pending inventory clearing the gate

STEP	TARGET WINDOW
Outreach to 2 additional orgs for visibility	Week of 09/07
Shared SGA posts across all 3 AUC schools	Week of 09/14

UNRESOLVED, OWNED BY KJ

What retention incentive keeps a student using Elevaid beyond their first search. Not a referral gimmick — a genuine reason to come back. Keep this in mind in campus conversations; input welcome, but the team decision comes later.

3 · What's Expected of You

Leverage relationships to drive a strong launch — real signups and word of mouth, not just polite interest.

Channels, in priority order

- 1 **Campus leaders** — direct, high-trust, org-to-org (this week's focus)
- 2 **Editorial/PR** — Morehouse × Spelman magazine/publication feature
- 3 **Institutional conversations** — school administration, the paying side, once real usage numbers exist to show
- 4 **Incentivized social promotion** — lowest priority; highest-risk (poorly designed incentives attract low-quality signups) and needs real design work before it launches

Sequencing logic

Bottom-up before top-down. Campus leaders + organic social generate real numbers (matched dollars, signups — already live on the homepage) *before* institutional conversations. The pitch becomes "here's what's already happening on your campus" instead of "trust my idea."

4 · How We'll Operate

- **2-week sprints** — scope set at the start of each
- **One weekly call**
- **Async written updates Monday / Wednesday / Friday** — what moved, what's blocked, what's next
- Visibility work and inventory growth are sequenced together — outreach steps that expose the scholarship count directly stay gated until inventory clears the agreed floor, checked against live data, not a guess
