

Technical Handoff — Dallas

Repo access, current system state, operating cadence, and what success looks like.

Internal Document · Confidential

September 4, 2026

1 · What Exists

Product: Live at elevaid.pro. React/TypeScript + Vite frontend, Supabase backend, deployed on Vercel.

Access already in place

Repo (public) `github.com/kdmjr0225123/auc-scholar-match`

Supabase project `https://swvfmitxxjrjuizaqvsu.supabase.co`

Current data — live, as of Sept 4, 2026

METRIC	VALUE
Registered students	55 (Morehouse 41 / Spelman 8 / Clark Atlanta 4 / Morris Brown 2)
Active scholarships	4
Combined award value	\$4,500
Applications tracked	0
Match floor	Every student ≥ 4 matches (Synthetic Coverage Check) — currently exactly 4, no margin

Architecture map

AREA	LOCATION
Student pages	<code>src/pages/</code>
Admin panel	<code>src/pages/Admin.tsx</code> , <code>src/components/admin/*</code>
Edge functions	<code>supabase/functions/</code>
Core tables	<code>scholarships</code> , <code>eligibility_rules</code> , <code>student_profiles</code> , <code>scholarship_staging</code> , <code>pipeline_logs</code> , <code>pipeline_runs</code> , <code>user_roles</code> , <code>synthetic_profiles</code> , <code>synthetic_coverage_runs</code> , <code>synthetic_coverage_results</code>
Migrations	<code>supabase/migrations/</code>
Ingestion pipeline	<code>elevaid_pipeline.py</code>

Automated systems in production (UTC)

TIME	JOB
Midnight daily	Expired scholarships auto-deactivated
8:00am daily	<code>scholarship-quality-check</code> — link validation, CAPTCHA/broken-link detection
8:15am daily	<code>synthetic-coverage-check</code> — 16 canary profiles re-scored against live matching logic
9:00am daily	Deadline reminder emails (7-day + 2-day) via Resend
On insert	<code>notify-new-scholarship</code> — emails matching students

KNOWN BEHAVIOR, NOT A BUG

`Dashboard.tsx` 's `calculateMatches` hard-excludes on **school** and **graduation year** only. GPA and major affect displayed match % but never exclude a match. `synthetic-coverage-check` deliberately mirrors this. Do not "fix" one without the other.

Recent history

- A 2.5-month pipeline bug silently deleted live scholarships (a new-candidate gate was wrongly applied to already-approved recheck runs). Found, fixed, confirmed.
- Security hardening pass completed: function `search_path` pinned, an over-broad RPC grant revoked.
- Application tracker + persistent resume upload shipped Aug 12.

2 · What's Needed

- Repo collaborator access — KJ to add you directly
- Supabase project access — KJ to add you as a project member (preferred over sharing static keys)
- Local `.env.local` created (not committed — repo root, see below)
- Week 1: full repo read, app running locally, pipeline → staging → eligibility flow traced end-to-end

```
VITE_SUPABASE_PROJECT_ID="swvfmittxxjrjuizaqvsn"
VITE_SUPABASE_URL="https://swvfmittxxjrjuizaqvsn.supabase.co"
VITE_SUPABASE_PUBLISHABLE_KEY="eyJhbGciOiJIUzI1NiIsInR5cCI6IkpXVCJ9.eyJpc3MiOiJzdXBhYmFzZSI6InJlZiI6InN3dmZtaXR4eGpyanVpemFxdnNuIiwicm9sZSI6ImFub24iLCJpcyYXQj0jE3NjU4NDYwNjUsImV4cCI6IjE6MjA4MTQyMjA2NX0.OTZFsXrqs-5C-HGIL6YaMEx0JG_JTrSvDTro_zrBfY54"
```

This is the public anon key — safe outside secure channels, ships in the client bundle already.

IMPORTANT

Service role key is not included above and must not be committed, Slacked, or placed in client-side code. It only belongs in an edge function's server env or Supabase's own secret store. Delivered separately via project membership or a secure channel.

3 · What's Expected of You

First sprint (weeks 1–2)

- Navigate the pipeline/staging/eligibility flow without assistance
- Understand what the Synthetic Coverage Check does and why it exists
- Be able to independently triage a broken-link or quarantine issue

Not expected in week 1: ownership of anything load-bearing. This is an onboarding runway, not a fire drill.

Second project, once inventory clears the gate: take ownership of ongoing pipeline maintenance and expansion, so it no longer depends solely on KJ. A deliberate handoff after week 1–2, not a day-one assignment.

Longer-term bar: you own pipeline health — scholarships keep flowing in without depending on one person's weekend.

4 · How We'll Operate

- **2-week sprints** — scope set at the start of each
- **One weekly call**
- **Async written updates Monday / Wednesday / Friday** — what moved, what's blocked, what's next. A few sentences, not a report.
- Bring questions to async updates or the weekly call rather than sitting on them.

Repo conventions (PowerShell)

- Commands run one at a time — no `&&` chaining
- File writes via `[System.IO.File]::WriteAllText()`
- Always `cd` into the repo root first
- Git flow: `git add .` → `git commit -m "..."` → `git push` as separate steps
